

Release Notes

DISCOVER 4.10.1 patch

[1. Introduction](#)

[2. Upgrade instructions](#)

1. Introduction

This document contains release notes of the DISCOVER version 4.10.1 patch and instructions to upgrade. Please make sure you have read this document before updating/installing this new release.

Improvements:

- Property templates are displayed once in the lens instead of twice in case the option 'expand to multiple values' is used . More details about the property template feature are on page 33 of the [DISCOVER 4.10 Data Science & Administrator Manual](#).
- The lens view is stable when user roles are combined with a property template.
- Analytics Dashboard legend items don't disappear in Chrome version 29.0.1547.65 and later.

Notes:

- The property template with the 'expand to multiple values' syntax <@PROPERTY@>, is not intended to be used to combine multiple properties and will result in unstable rendering.

Known issues:

- Not applicable

2. Upgrade instructions

Upgrading to version 4.10.1 is only possible from version 4.0 and 4.1. If you want to upgrade from an earlier version, you need to upgrade to version 4.0 first. See the [release notes of DISCOVER version 4.0](#) for more details on how to upgrade to version 4.0.

This upgrade can be executed by running the command:

```
sudo /data/code/scripts/update_discover.sh --version=4.10.1
```

The ONTOFORCE support team is available at support@ontoforce.com to provide assistance with the upgrade.
